# Survey Overview (FY 2024 Survey Cycle)

---

## Purpose

The Higher Education Research and Development (HERD) Survey is the primary source of information on separately accounted-for research and development (R&D) expenditures within higher education institutions in the United States and outlying areas. The survey is conducted by the National Center for Science and Engineering Statistics (NCSES) within the U.S. National Science Foundation (NSF).

## Data collection authority

The information is solicited under the authority of the National Science Foundation Act of 1950, as amended, and the America COMPETES Reauthorization Act of 2010. The Office of Management and Budget control number is 3145–0100, with an expiration date of 31 July 2025. NCSES has reviewed this product for unauthorized disclosure of confidential information and approved its release (NCSES-DRN25-060).

## Survey contractor

ICF.

## Major changes to recent survey cycle

None.

## Key Survey Information

---

<b>Frequency</b>	Annual.
<b>Initial survey year</b>	In 2010, the HERD Survey replaced a previous annual collection, the NSF Survey of Research and Development Expenditures at Universities and Colleges (Academic R&D Expenditures Survey), which was conducted from FY 1972 through FY 2009.
<b>Reference period</b>	The academic fiscal year ending in 2024; for most institutions this was 1 July 2023 to 30 June 2024.
<b>Response unit</b>	Establishment; U.S. academic institutions reporting at least \$150,000 in R&D expenditures in FY 2023.
<b>Sample or census</b>	Census.
<b>Population size</b>	A total of 925 institutions.
<b>Sample size</b>	The survey was a census of all known eligible universities and colleges.
<b>Key variables</b>	<p>Key variables of interest are listed below.</p> <ul style="list-style-type: none"> <li>● R&amp;D expenditures by field and source of funds (i.e., federal government, state and local government, business, nonprofit, institutional, and other)</li> <li>● R&amp;D expenditures funded from foreign sources</li> <li>● R&amp;D expenditures within medical schools</li> <li>● Clinical trial R&amp;D expenditures (Phases I–III)</li> <li>● R&amp;D expenditures by type of R&amp;D (i.e., basic research, applied research, and experimental development)</li> <li>● Total and federally funded R&amp;D expenditures passed through to subrecipients or received as a subrecipient</li> <li>● Federally funded R&amp;D expenditures by field and federal agency</li> <li>● R&amp;D expenditures by cost categories (e.g., salaries, software, equipment, indirect costs)</li> <li>● Total and federally funded R&amp;D equipment expenditures by field</li> <li>● Headcounts and full-time equivalents of R&amp;D personnel functions (researchers, R&amp;D technicians, and R&amp;D support staff)</li> <li>● Institutional characteristics (i.e., highest degree granted, historically Black college or university [HBCU], high Hispanic enrollment [HHE], public or private control)</li> <li>● Geographic location within the United States</li> </ul>

# Survey Design

---

## Target population

Public and private nonprofit postsecondary institutions in the United States, Guam, Puerto Rico, and the U.S. Virgin Islands that granted a bachelor's degree or higher in any field, expended at least \$150,000 in separately accounted-for R&D in FY 2024 and were geographically separate campuses headed by a president, chancellor, or equivalent.

## Sampling frame

The frame for the HERD Survey was constructed from three sources: the previous year's HERD frame; the U.S. Department of Education's Integrated Postsecondary Education Data System (IPEDS); and the Higher Education Directory. A brief population review screener was sent to institutions identified through the latter two sources to determine whether the institution had R&D expenditures of at least \$150,000 during FY 2023 and FY 2024. All academic institutions in these sources that had \$150,000 or more in separately budgeted R&D expenditures for FY 2023 and were geographically separate campuses headed by a president, chancellor, or equivalent were included in the frame. In the FY 2024 cycle, there were 925 academic institutions in the frame.

## Sample design

The survey is a census of all eligible institutions as defined above. In the FY 2024 cycle, there were 925 academic institutions surveyed.

# Data Collection and Processing

---

## Data collection

The FY 2024 survey was conducted by ICF under contract to NCSES. Surveys were distributed to designated contacts at each institution. The data collection period was from November 2024 through July 2025. Respondents submitted their data using a Web-based questionnaire. Telephone and e-mail were used for follow-up contacts with respondents.

## Data processing

Questionnaires were carefully examined by survey staff upon receipt. Reviews focused on unexplained missing data and explanations provided for changes in reporting patterns. If additional explanations or data revisions were needed, respondents were sent personalized e-mail messages asking them to provide any necessary revisions before the final processing and tabulation of data.

## Estimation techniques

Missing values were imputed based on the previous year's data and the reported data of peer institutions in the current cycle.

# Survey Quality Measures

---

## Sampling error

Because the FY 2024 survey was distributed to all institutions in the universe, there was no sampling error.

## Coverage error

Coverage error of large research institutions is minimal because comprehensive lists exist. These institutions are easily identified using the NCSES Survey of Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions. However, institutions with smaller amounts of R&D expenditures have been more difficult to identify because they often do not receive federal funding for science and engineering R&D.

NCSES annually screens all 4-year and above institutions reporting nonzero amounts of research expenses to the Department of Education Integrated Postsecondary Education Data System (IPEDS) to determine if new institutions qualify for inclusion in the survey.

## Nonresponse error

The unit nonresponse was 4.8% in FY 2024. Nonresponse rates were less than 5.0% for all but three questions. Question 6, R&D expenditures by type of R&D (basic research, applied research, and experimental development); Question 15, R&D personnel headcount; and Question 16, R&D full-time equivalents (FTEs) had nonresponse rates of 6.5%, 10.2%, and 22.9%, respectively.

## Measurement error

Potential sources of measurement errors include incomplete administrative data or differing categories used by the institutions to identify R&D.

# Data Availability and Comparability

---

## Data availability

Annual data are available for FYs 1972–2024.

## Data comparability

When the review for consistency between each year's data and submissions in prior years reveals discrepancies, it is sometimes necessary to modify prior years' unreported data. This is especially likely to affect trends for certain institutions that fail to report every year because current year data are used to impute prior year data.

For accurate historical data, use only the most recently released data tables. Some tables historically released in the HERD Data Tables Report are now made available only in the Web-based NCSES Table Builder tool. See "[Data Products](#)" below for changes in the presentation of data tables beginning with FY 2024. These changes were made to shorten publication timelines. Individuals wishing to analyze trends other than those in the most recent data tables are encouraged to contact NCSES for more information about comparability of data over time.

# Data Products

---

## Publications

NCSES publishes data from this survey annually in detailed tables and analytic reports available at the [HERD Survey page](#). NCSES reduced the number of data tables provided for the FY 2024 survey to 55 from the 86 tables provided for FY 2023. A crosswalk detailing the change in table availability is presented in technical table A-23. Data users can still produce the discontinued tables through the [NCSES Table Builder](#). Information from this survey is also included in *Science and Engineering Indicators*.

## Electronic access

Microdata beginning with the FY 2010 survey are available in NCSES's [interactive data tool](#). Public use files beginning with the FY 1972 are available at the [HERD microdata page](#).
