

Figure TRN-B. Share of new GitHub repositories, by region, country, or economy of contributor: 2024

**Note(s):**

This figure is based on the contributions to new GitHub repositories contributed to by each country per year using the fractional-counting method. Each new repository's credit is divided equally across its contributors, and each contributor's share is further divided across their associated countries. This ensures that the total sum of all countries' contributions matches the total number of unique repositories. See Table STRN-33.
