## General Notes

---

The National Survey of College Graduates, conducted by the National Center for Science and Engineering Statistics within the National Science Foundation, is a repeated cross-sectional biennial survey that collects information on the nation's college-educated workforce. This survey is a unique source for examining the relationship between degree field and occupation, as well as for examining other characteristics of college-educated individuals, including work activities, salary, and demographic information.

## Data Tables

---

### Fields of study of college graduates

Table	Title
1-1	College graduates, by level of highest degree, minor field of highest degree, and labor force status: 2021
1-2	Employed college graduates, by level of highest degree, minor field of highest degree, and major occupation: 2021
1-3	Relationship of highest degree to job among employed college graduates, by level of highest degree, minor field of highest degree, and broad occupation: 2021
1-4	Employed college graduates, by level of highest degree, minor field of highest degree, and detailed employment sector: 2021
1-5	Employed scientists and engineers, by sex, major field of highest degree, ethnicity, race, disability status, and type of disability: 2021

### Occupations of college graduates

Table	Title
2-1	Employed college graduates, by level of highest degree, major occupation, sex, ethnicity, race, and disability status: 2021
2-2	Full-time employed college graduates, by major occupation, age, level of highest degree, and sex: 2021
2-3	Full-time employed college graduates, by sex, major occupation, age, ethnicity, race, disability status, and citizenship status: 2021
2-4	Employed college graduates, by minor occupation and major field of highest degree: 2021
2-5	Employed college graduates, by major occupation, sex, ethnicity, race, disability status, and detailed employment sector: 2021
2-6	Employed college graduates, by level of highest degree, major occupation, possession of a certification or license, and primary field of certification or license: 2021

### Work activities and job satisfaction of employed college graduates

Table	Title
3-1	Employed college graduates, by level of highest degree, minor occupation, and primary work activity: 2021
3-2	Employed college graduates, by employment sector, minor occupation, and job satisfaction: 2021

Table	Title
3-3	Employed college graduates, by sex, major occupation, job satisfaction, and primary work activity: 2021
3-4	Employed college graduates, by sex, major occupation, job satisfaction, and years since highest degree: 2021

## Median salaries of full-time employed college graduates

Table	Title
4-1	Median annual salaries of full-time employed college graduates, by major occupation, age, level of highest degree, and sex: 2021
4-2	Median annual salaries of full-time employed college graduates, by sex, major occupation, age, ethnicity, race, disability status, and citizenship status: 2021
4-3	Employment counts and median annual salaries of full-time employed scientists and engineers, by major field of highest degree, employment sector, and primary work activity: 2021

## Demographic characteristics of college graduates

Table	Title
5-1	College graduates, by age, sex, ethnicity, race, disability status, and age at onset of disability, broad occupation, labor force status, and median annual salary: 2021
5-2	College graduates, by broad occupation, labor force status, labor force status characteristics, sex, ethnicity, race, and disability status: 2021
5-3	College graduates, by broad field of highest degree, father's education, mother's education, level of highest degree, and median amount borrowed to finance undergraduate degree: 2021
5-4	Employed college graduates, by nativity, level of highest degree, major occupation, and employment sector: 2021
5-5	Employed foreign-born college graduates, by broad degree field, country of birth, and broad occupation: 2021

## College graduates over time

Table	Title
6-1	Employed scientists and engineers, by level of highest degree and minor field of highest degree: 2003–21
6-2	Employed college graduates, by sex, race, ethnicity, and major occupation: 2003–21
6-3	Employed college graduates, by sex, level of highest degree, and major occupation: 2003–21

Table Title

---

6-4 Employed college graduates, by nativity, level of highest degree, and major occupation: 2003–21

---

TABLE 1-1

**College graduates, by level of highest degree, minor field of highest degree, and labor force status: 2021**

(Number)

Level and field of highest degree	Total	Employed				Unemployed <sup>a</sup>	Not in labor force <sup>b</sup>
		Total	S&E occupations	S&E-related occupations	Non-S&E occupations		
All degrees	68,593,000	51,764,000	7,894,000	9,522,000	34,349,000	3,160,000	13,669,000
S&E fields	21,357,000	16,408,000	6,059,000	2,405,000	7,944,000	939,000	4,011,000
Biological, agricultural, and environmental life sciences	3,433,000	2,570,000	768,000	667,000	1,136,000	150,000	714,000
Agricultural and food sciences	406,000	308,000	73,000	40,000	195,000	12,000	86,000
Biological sciences	2,612,000	1,937,000	610,000	591,000	737,000	120,000	555,000
Environmental life sciences	416,000	325,000	85,000	36,000	204,000	18,000	74,000
Computer and mathematical sciences	3,897,000	3,147,000	1,795,000	463,000	889,000	166,000	584,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Unemployed includes individuals who were not working during the survey reference week but had been seeking work in the prior 4 weeks or who were on layoff from their job.

<sup>b</sup> Not in the labor force includes individuals who were not working during the survey reference week and had not been seeking work in the prior 4 weeks because of family responsibilities, chronic illness, or other reasons.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

\* = suppressed when population estimate &lt; 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&amp;E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Scientists and engineers are bachelor's and higher degreed individuals living in the United States employed in an S&amp;E occupation. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate &lt; 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&amp;E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Full-time employed college graduates are individuals working at least 35 hours in a typical week. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Includes medical schools and university-affiliated research institutes.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Management and administration includes respondents who reported the following work activities: accounting, finance, or contracts; human resources; quality or productivity management; sales and marketing; or managing and supervising.

<sup>b</sup> Research and development includes basic research, applied research, or development.

<sup>c</sup> Other work activities includes production, operations, maintenance, professional services, and other activities not broken out separately. "Design" is no longer included in the definition of "Other" and is now its own category.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

TABLE 3-2

**Employed college graduates, by employment sector, minor occupation, and job satisfaction: 2021**

(Number)

Sector and occupation	Total	Job satisfaction			
		Very satisfied	Somewhat satisfied	Somewhat dissatisfied	Very dissatisfied
All sectors	51,764,000	22,804,000	23,329,000	4,394,000	1,236,000
S&E occupations	7,894,000	3,493,000	3,651,000	617,000	133,000
Biological, agricultural, and other life scientists	794,000	346,000	371,000	65,000	12,000
Agricultural and food scientists	74,000	30,000	39,000	4,000	*
Biological and medical scientists	572,000	240,000	274,000	50,000	8,000
Environmental life scientists	45,000	27,000	14,000	3,000	2,000
Postsecondary teachers - life and related sciences	103,000	49,000	43,000	8,000	S
Computer and mathematical scientists	4,031,000	1,736,000	1,896,000	332,000	67,000
Computer and information scientists	3,627,000	1,551,000	1,729,000	288,000	60,000
Mathematical scientists	293,000	133,000	118,000	36,000	6,000
Postsecondary teachers - computer and math sciences	111,000	52,000	49,000	8,000	S
Physical and related scientists	408,000	166,000	202,000	33,000	8,000
Chemists, except biochemists	114,000	39,000	58,000	13,000	4,000
Earth, atmospheric, and ocean scientists	91,000	42,000	42,000	5,000	1,000
Physicists	41,000	22,000	17,000	2,000	D
Other physical and related scientists, including astronomers	82,000	29,000	47,000	6,000	D
Postsecondary teachers - physical and related sciences	80,000	34,000	38,000	6,000	S
Social and related scientists	712,000	335,000	313,000	50,000	14,000
Economists	47,000	31,000	15,000	2,000	*
Political scientists	39,000	19,000	18,000	S	D
Psychologists	233,000	122,000	97,000	9,000	S
Anthropologists	13,000	6,000	7,000	D	D
Other social and related scientists	191,000	77,000	94,000	17,000	2,000
Postsecondary teachers - social and related sciences	188,000	80,000	82,000	20,000	5,000
Engineers	1,949,000	911,000	869,000	137,000	32,000
Aerospace, aeronautical, and astronautical engineers	127,000	56,000	60,000	11,000	*
Chemical engineers	80,000	38,000	33,000	7,000	2,000
Civil, architectural, and sanitary engineers	303,000	160,000	117,000	23,000	3,000
Electrical and computer hardware engineers	399,000	196,000	177,000	21,000	6,000
Industrial engineers	96,000	42,000	44,000	7,000	S
Mechanical engineers	388,000	160,000	190,000	31,000	6,000
Other engineers	501,000	236,000	220,000	33,000	11,000
Postsecondary teachers - engineering	55,000	22,000	28,000	4,000	D
S&E-related occupations	9,522,000	4,272,000	4,346,000	706,000	198,000
Health-related occupations	6,136,000	2,741,000	2,787,000	461,000	146,000
S&E managers	1,135,000	558,000	484,000	74,000	18,000
S&E precollege teachers	915,000	410,000	429,000	66,000	11,000
S&E technicians and technologists	1,088,000	438,000	544,000	84,000	21,000
Other S&E-related occupations	248,000	124,000	101,000	20,000	S
Non-S&E occupations	34,349,000	15,038,000	15,333,000	3,072,000	905,000
Non-S&E managers	4,985,000	2,684,000	1,907,000	312,000	81,000
Management-related occupations	7,868,000	3,411,000	3,579,000	703,000	175,000
Non-S&E precollege teachers	3,919,000	1,572,000	1,989,000	285,000	73,000
Non-S&E postsecondary teachers	559,000	241,000	272,000	39,000	8,000
Social services and related occupations	2,072,000	883,000	954,000	182,000	53,000

TABLE 3-2

**Employed college graduates, by employment sector, minor occupation, and job satisfaction: 2021**

(Number)

Sector and occupation	Total	Job satisfaction			
		Very satisfied	Somewhat satisfied	Somewhat dissatisfied	Very dissatisfied
Sales and marketing occupations	4,448,000	1,893,000	1,948,000	468,000	139,000
Art, humanities, and related occupations	1,408,000	603,000	651,000	127,000	27,000
Other non-S&E occupations	9,089,000	3,753,000	4,033,000	956,000	348,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Business or industry includes self-employed individuals, nonprofit organizations, and other unspecified types of employers. Education includes 4-year colleges and universities, medical schools, university-affiliated research institutes, 2-year colleges, pre-college institutions, and other educational institutions. Government includes federal (civilian), military, state, and local employers.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Management and administration includes respondents who reported the following work activities: accounting, finance, or contracts; human resources; quality or productivity management; sales and marketing; or managing and supervising.

<sup>b</sup> Research and development includes basic research, applied research, or development.

<sup>c</sup> Other work activities includes production, operations, maintenance, professional services, and other activities not broken out separately. "Design" is no longer included in the definition of "Other" and is now its own category.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Median annual salaries are rounded to the nearest \$1,000. Full-time employed college graduates are individuals working at least 35 hours in a typical week. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Management and administration includes respondents who reported the following work activities: accounting, finance, or contracts; human resources; quality or productivity management; sales and marketing; or managing and supervising.

<sup>b</sup> Research and development includes basic research, applied research, or development.

<sup>c</sup> Other work activities includes production, operations, maintenance, professional services, and other activities not broken out separately. "Design" is no longer included in the definition of "Other" and is now its own category.

**Note(s):**

Population counts are rounded to the nearest 1,000. Detail may not add to total because of rounding. Median annual salaries are rounded to the nearest \$1,000. Scientists and engineers are bachelor's and higher degreed individuals living in the United States employed in an S&E occupation. Four-year educational institution includes medical schools and university-affiliated research institutes. Government includes federal (civilian), military, state, and local employers.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Unemployed includes individuals who were not working during the survey reference week but had been seeking work in the prior 4 weeks or who were on layoff from their job.

<sup>b</sup> Not in the labor force includes individuals who were not working during the survey reference week and had not been seeking work in the prior 4 weeks because of family responsibilities, chronic illness, or other reasons.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Median annual salaries are rounded to the nearest \$1,000. Full-time employed college graduates are individuals working at least 35 hours in a typical week. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. This table does not include individuals who have never worked for pay or profit. If respondent was not employed during survey reference period, occupation when last employed was reported. All individuals who report working part time, regardless of their preference for working part time, are asked their reasons for working part time. Full-time employed college graduates are individuals working at least 35 hours in a typical week. All individuals who report not working, regardless of if they are looking for work, are asked their reasons for not working. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Totals for master's, doctorate, and professional highest degree earners include individuals who did not earn an undergraduate degree. These are primarily individuals who earned a first degree at an international institution for which the award is not counted as an undergraduate award by U.S. standards.

All other countries	946,000	57,000	51,000	838,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. For each broad degree field, data are presented for the 25 countries with the largest numbers of foreign-born college graduates employed in the United States during the survey reference week. Data include noncitizen college graduates who are on permanent or temporary visas.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Scientists and engineers are bachelor's and higher degree individuals living in the United States employed in an S&E occupation.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Hispanic or Latino may be any race; race categories exclude Hispanic origin.

National Center for Science and Engineering Statistics, National Survey of College Graduates.

## Technical Notes

---

### Survey Overview

*Purpose.* The National Survey of College Graduates (NSCG) provides data on the characteristics of the nation's college graduates, with a focus on those in the science and engineering (S&E) workforce. It samples individuals who are living in the United States during the survey reference week, have earned at least a bachelor's degree, and are younger than 76. By surveying college graduates in all academic disciplines, the NSCG provides data useful in understanding the relationship between college education and career opportunities, as well as the relationship between degree field and occupation.

The NSCG is designed to provide demographic, education, and career history information about college graduates and to complement another survey conducted by the National Center for Science and Engineering Statistics (NCSES): the Survey of Doctorate Recipients (SDR, <https://www.nsf.gov/statistics/srvydoctoratework/>). These two surveys share a common reference date, and they use similar questionnaires and data processing guidelines.

The 2021 NSCG data collection instrument included new questions to gauge the effects of the coronavirus pandemic on employment, specifically on labor force status, number of hours worked per week, salary, benefits, telecommuting options, and total earned income.

These technical notes provide an overview of the 2021 NSCG. Complete details are provided in the 2021 NSCG Methodology Report, available upon request from the NSCG Survey Manager.

*Data collection authority.* The information collected in the NSCG is solicited under the authority of the National Science Foundation Act of 1950, as amended, and the America COMPETES Reauthorization Act of 2010. The Census Bureau collects the NSCG data, on behalf of NCSES, under the authority of Title 13, Section 8 of the United States Code. The Office of Management and Budget control number is 3145-0141.

*Survey contractor.* Census Bureau.

*Survey sponsor.* NCSES.

### Key Survey Information

*Frequency.* Biennial.

*Initial survey year.* 1993.

*Reference period.* The week of 1 February 2021.

*Response unit.* Individual.

*Sample or census.* Sample.

*Population size.* Approximately 68.6 million individuals.

*Sample size.* Approximately 164,000 individuals.

### Survey Design

*Target population.* The NSCG target population includes individuals who meet the following criteria:

- Earned a bachelor's degree<sup>1</sup> or higher prior to 1 January 2020
- Are not institutionalized and reside in the United States or Puerto Rico as of 1 February 2021

- Are younger than 76 years as of 1 February 2021

*Sampling frame.* Using a rotating panel design, the 2021 NSCG includes new sample cases from the 2019 American Community Survey (ACS) and returning sample cases from the 2019 NSCG.

The NSCG sampling frame for new sample cases included the following eligibility requirements:

- Were residing in the United States or Puerto Rico as of the ACS interview date
- Were noninstitutionalized as of the ACS interview date
- Had earned at least a bachelor's degree as of the ACS interview date
- Would be under the age of 76 as of 1 February 2021
- Did not have an inaccurate name or incomplete address on the ACS data file

Returning sample cases from the 2019 NSCG originated from three different frames (the 2013 ACS, 2015 ACS, and 2017 ACS) and had the following eligibility requirements:

- Were a complete interview or temporarily ineligible during their initial NSCG survey cycle
- Would be under the age of 76 as of 1 February 2021
- During the 2019 NSCG survey cycle, did not refuse to participate and request to be excluded from future NSCG cycles

*Sample design.* The NSCG sample design is cross-sectional with a rotating panel element. As a cross-sectional study, the NSCG provides estimates of the size and characteristics of the college graduate population for a point in time. As part of the rotating panel design, every new panel receives a baseline survey interview and three biennial follow-up interviews before rotating out of the survey.

The NSCG uses a stratified sampling design to select its sample from the eligible sampling frame. In the new sample, cases were selected using systematic probability proportional to size (PPS) sampling.<sup>2</sup> Among the returning sample, all eligible cases were selected. The sampling strata were defined by the cross-classification of the following four variables:

- Young graduate oversample group eligibility indicator (2 levels)
- Demographic group (9 levels)
- Highest degree type (3 levels)
- Detailed occupation group (25 levels)

As has been the case since the 2013 NSCG, the 2021 NSCG includes an oversample of young graduates to improve the precision of estimates for this important population. The 2021 NSCG includes approximately 164,000 sample cases drawn from the following:

- Returning sample from the 2019 NSCG who were originally selected from the 2013 ACS
- Returning sample from the 2019 NSCG who were originally selected from the 2015 ACS
- Returning sample from the 2019 NSCG who were originally selected from the 2017 ACS
- New sample selected from the 2019 ACS

Approximately 90,000 cases were selected from the returning sample members for one of the three biennial follow-up interviews that are part of the rotating panel design. For the baseline survey interview, about 74,000 new sample cases were selected from the 2019 ACS.

## Data Collection and Processing Methods

*Data collection.* The data collection period lasted approximately 7 months (8 April 2021 to 1 November 2021). The NSCG used a trimodal data collection approach: self-administered online survey (Web), self-administered paper questionnaire (via mail), and computer-assisted telephone interview (CATI). Individuals in the sample generally were started in the Web mode, depending on their available contact information and past preference. After an initial survey invitation, the data collection protocol included sequential contacts by postal mail, e-mail, and telephone that ran throughout the data collection period. At any time during data collection, sample members could choose to complete the survey using any of the three modes. Nonrespondents to the initial survey invitation received follow-up contacts via alternate modes.

Quality assurance procedures were in place at each data collection step (e.g., address updating, printing, package assembly and mailing, questionnaire receipt, data entry, CATI, coding, and post-data collection processing).

*Mode.* About 89% of the participants completed the survey by Web, 7% by mail, and 4% by CATI.

*Response rates.* Response rates were calculated on complete responses, that is, from instruments with responses to all critical items. Critical items are those containing information needed to report labor force participation (including employment status, job title, and job description), college education (including degree type, degree date, and field of study), and location of residency on the reference date. The overall unweighted response rate was 67%; the weighted response rate was 65%. Of the roughly 164,000 persons in the 2021 NSCG sample, 106,279 completed the survey.

*Data editing.* Response data had initial editing rules applied relative to the specific mode of capture to check internal consistency and valid range of response. The Web survey captured most of the survey responses and had internal editing controls where appropriate. A computer-assisted data entry (CADE) system was used to process the mailed paper forms. Responses from the three separate modes were merged for subsequent coding, editing, and cleaning necessary to create an analytical database.

Following established NCSES guidelines for coding NSCG survey data, including verbatim responses, staff were trained in conducting a standardized review and coding of occupation and education information, certifications, “other/specify” verbatim responses, state and country geographical information, and postsecondary institution information. For standardized coding of occupation (including auto-coding), the respondent's reported job title, duties and responsibilities, and other work-related information from the questionnaire were reviewed by specially trained coders who corrected respondents' self-reporting errors to obtain the best occupation codes. For standardized coding of field of study associated with any reported degree (including auto-coding), the respondent's reported department, degree level, and field of study information from the questionnaire were reviewed by specially trained coders who corrected respondents' self-reporting errors to obtain the best field of study codes.

*Imputation.* Logical imputation was primarily accomplished as part of editing. In the editing phase, the answer to a question with missing data was sometimes determined by the answer to another question. In some circumstances, editing procedures found inconsistent data that were blanked out and therefore subject to statistical imputation.

The item nonresponse rates reflect data missing after logical imputation or editing but before statistical imputation. For key employment items—such as employment status, sector of employment, and primary work activity—the item nonresponse rates ranged from 0.0% to 1.1%. Nonresponse to questions deemed sensitive was higher: nonresponse to salary and earned income was 5.4% and 7.8%, respectively, for the new sample members and 4.7% and 6.8%, respectively, for the returning members. Personal demographic data of the new sample members had variable item nonresponse rates, with sex at 0.00%, birth year at 0.04%, marital status at 0.6%, citizenship at 0.4%, ethnicity at 1.4%, and race at 3.1%. The nonresponse rates for returning sample members were 0.8% for marital status and 0.7% for citizenship.

Item nonresponse was typically addressed using statistical imputation methods. Most NSCG variables were subjected to hot-deck imputation, with each variable having its own class and sort variables chosen by regression modeling to identify nearest neighbors for imputed information. For some variables, there was no set of class and sort variables that was reliably related to or suitable for predicting the missing value, such as day of birth. In these instances, random imputation was used, so that the distribution of imputed values was similar to the distribution of reported values without using class or sort variables.

Imputation was not performed on critical items or on verbatim-based variables. In addition, for some missing demographic information, the NSCG imported the corresponding data from the ACS, which had performed its own imputation.

*Weighting.* Because the NSCG is based on a complex sampling design and subject to nonresponse bias, sampling weights were created for each respondent to support unbiased population estimates. The final analysis weights account for several factors, including the following:

- Adjustments to account for undercoverage of recent immigrants and undercoverage of recent degree-earners
- Adjustment for incorrect names or incomplete address information on the sampling frame
- Differential sampling rates
- Adjustments to account for non-locatability and unit nonresponse
- Adjustments to align the sample distribution with population controls
- Trimming of extreme weights
- Overlap procedures to convert weights that reflect the population of each individual frame (2013 ACS, 2015 ACS, 2017 ACS, and 2019 ACS) into a final sample weight that reflects the 2021 NSCG target population

The final sample weights enable data users to derive survey-based estimates of the NSCG target population. The variable name on the NSCG public use data files for the NSCG final sample weight is WTSURVY.

*Variance estimation.* The successive difference replication method (SDRM) was used to develop replicate weights for variance estimation. The theoretical basis for the SDRM is described in Wolter (1984) and in Fay and Train (1995). As with any replication method, successive difference replication involves constructing numerous subsamples (replicates) from the full sample and computing the statistic of interest for each replicate. The mean square error of the replicate estimates around their corresponding full sample estimate provides an estimate of the sampling variance of the statistic of interest. The 2021 NSCG produced 320 sets of replicate weights.

*Disclosure protection.* To protect against the disclosure of confidential information provided by NSCG respondents, the estimates presented in NSCG data tables are rounded to the nearest 1,000.

Data table cell values based on counts of respondents that fall below a predetermined threshold are deemed to be sensitive to potential disclosure, and the letter “D” indicates this type of suppression in a table cell.

## Survey Quality Measures

*Sampling error.* NSCG estimates are subject to sampling errors. Estimates of sampling errors associated with this survey were calculated using replicate weights. Data table estimates with coefficients of variation (that is, the estimate divided by the standard error) that exceed a predetermined threshold are deemed unreliable and are suppressed. The letter “S” indicates this type of suppression in a table cell.

*Coverage error.* Coverage error occurs in sample estimates when the sampling frame does not accurately represent the target population and is a type of nonsampling error. Any missed housing units or missed individuals within sample households in the ACS would create undercoverage in the NSCG. Additional undercoverage errors may exist because of self-reporting errors in the NSCG sampling frame that led to incorrect classification of individuals as not having a bachelor's degree or higher when in fact they held such a degree.

*Nonresponse error.* The weighted response rate for the 2021 NSCG was 65%; the unweighted response rate was 67%. Analyses of NSCG nonresponse trends were used to develop nonresponse weighting adjustments to minimize the potential for nonresponse bias in the NSCG estimates. A hot deck imputation method was used to compensate for item nonresponse.

*Measurement error.* The NSCG is subject to reporting errors from differences in interpretation of questions and by modality (Web, mail, CATI). To reduce measurement errors, the NSCG questionnaire items were pretested in focus groups and cognitive interviews.

## Data Comparability and Changes

*Data comparability.* Year-to-year comparisons of the nation's college-educated population can be made among the 1993, 2003, 2010, 2013, 2015, 2017, 2019, and 2021 survey cycles because many of the core questions remained the same. Since the 1995, 1997, 1999, 2006, and 2008 surveys do not provide full coverage of the nation's college-educated population, any comparison between these cycles and other cycles should be limited to those individuals educated or employed in S&E fields.

Small but notable differences exist across some survey cycles, however, such as the collection of occupation and education data based on more recent taxonomies. Also, because of the use of different reference months in some survey cycles, seasonal differences may occur when making comparisons across years. Thus, use caution when interpreting cross-cycle comparisons.

There is overlap in the cases included in the 2010 NSCG through the 2017 NSCG, in the 2013 NSCG through the 2019 NSCG, and in the 2015 NSCG through the 2021 NSCG (see [figure 1](#)). The overlap among cases allows for longitudinal analysis of a subset of the NSCG sample using restricted use data files within NCSES' Secure Data Access Facility (SDAF). Cases can be linked across survey years using a unique identification variable and single-frame weights are available for each survey year, allowing for the evaluation of estimates from each frame independently. If you are interested in applying for a license to access restricted use NSCG data via the SDAF, please visit [NCSES Restricted-Use Data Procedures Guide](#). Moreover, the Census Bureau offers NSCG restricted use data files that include a few additional data elements. These files can be accessed via the [Federal Statistical Research Data Centers](#).

ACS = American Community Survey; NSCG = National Survey of College Graduates; NSRCG = National Survey of Recent College Graduates.

**Note(s):**

During a panel's second survey cycle (in which it is part of the returning sample for the first time), its members include individuals who responded or who were temporarily ineligible during the first cycle. During a panel's third and fourth cycles, its members include all respondents, nonrespondents, and temporarily ineligible cases from the preceding cycle. Beginning in 2013, the NSCG transitioned to a design that includes an oversample of young graduates to improve the precision of estimates for this important population.

National Center for Science and Engineering Statistics, National Science Foundation, National Survey of College Graduates.

*Changes in survey coverage and population.* None.

*Changes in questionnaire*

- 2021. To gauge the effects of the coronavirus pandemic on employment, the content of the NSCG questionnaire was modified for 2021 in two ways:
  1. The response options of long-standing items were revised to identify pandemic-related consequences: for example, reasons for not working, reasons for working part time, reasons for changing employment, and available job benefits.
  2. New items were added to understand the effects of the pandemic on salaries and earnings and to measure the prevalence of telework.
- 2019. The content of the 2019 NSCG questionnaire remained unchanged from the 2017 NSCG version.
- 2017. The 2017 NSCG questionnaire added two new questions about U.S. military veteran status that are asked on the ACS.
- 2015. The 2015 NSCG questionnaire added a section on professional certifications and licenses.

- 2013. The 2013 NSCG questionnaire added questions about attendance at community colleges, amounts borrowed to finance undergraduate and graduate degrees, and sources of financial support for undergraduate and graduate degrees. The 2013 questionnaire also differed from the 2010 questionnaire by splitting the first response category for the indicator of sample member location on the survey reference date into two categories. “United States, Puerto Rico, or another U.S. territory” became “United States or Puerto Rico” and “Another U.S. territory.”
- 2010. The 2010 NSCG questionnaire added items on components of job satisfaction, importance of job benefits, year of retirement, whether employer is a new business, and degree of difficulty concentrating, remembering, or making decisions.

#### *Changes in reporting procedures or classification*

- In past years, NSCG data were combined with data from the SDR and the NSRCG to form the Scientists and Engineers Statistical Data System (SESTAT). The last series of tables produced from SESTAT used 2013 NSCG data. Since then, NSCG data have been used in numerous tables for NCSES’s two congressionally mandated reports ([Science and Engineering Indicators](#) and [Women, Minorities, and Persons with Disabilities in Science and Engineering](#)).

## Definitions

*Field of degree.* NSCG respondents are asked to report each degree they have earned at the bachelor’s level or higher, along with the major field of study for each degree. The 2021 NSCG used a taxonomy of 142 “detailed” fields of study from which respondents could select the field that best represented their major. These 142 “detailed” fields of study were aggregated into 31 “minor” fields, 7 “major” fields, and 3 “broad” fields (S&E, S&E-related, and non-S&E). (See [technical table A-1](#) for a list and classification of fields of study reported in the NSCG.)

*Full-time and part-time employment.* Full-time (working 35 hours or more per week) and part-time (working less than 35 hours per week) employment status is for the principal job only and not for all jobs held in the labor force. For example, an individual who works part time in his or her principal job but full time in the labor force would be tabulated as part time.

*Highest degree level.* NSCG respondents report the degrees they have earned at the bachelor’s level (e.g., BS, BA, AB), master’s level (e.g., MS, MA, MBA), and doctorate level (e.g., PhD, DSc, EdD), as well as other professional degrees (e.g., JD, LLB, MD, DDS, DVM). Because the NSCG is focused on the S&E workforce, the sampling strategy does not include a special effort to collect professional degrees. As such, there is not always sufficient data for the professional degrees to be displayed separately in the tables.

*Occupation data.* The occupational classification of the respondent was based on his or her principal job (including job title) held during the reference week—or on his or her last job held, if not employed in the reference week (survey questions A5 and A6 as well as A16 and A17). Also used in the occupational classification was a respondent-selected job code (survey questions A7 and A18). (See [technical table A-2](#) for a list and classification of occupations reported in the NSCG.)

*Race and ethnicity.* Ethnicity is defined as Hispanic or Latino or not Hispanic or Latino. Values for those selecting a single race include American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, and White. Those persons who report more than one race and who are not of Hispanic or Latino ethnicity also have a separate value.

*Salary.* Median annual salaries are reported for the principal job, rounded to the nearest \$1,000, and computed for individuals employed full time. For individuals employed by educational institutions, no accommodation was made to convert academic year salaries to calendar year salaries.

*Sector of employment.* Employment sector is a derived variable based on responses to questionnaire items A13, A14, and A15. In the data tables, the category 4-year educational institution includes 4-year colleges or universities, medical schools (including university-affiliated hospitals or medical centers), and university-affiliated research institutes. Two-year and pre-college institutions include community colleges, technical institutes, and other educational institutions (which respondents reported verbatim in the survey questionnaire). For-profit business or industry includes respondents who were self-employed in an incorporated business. Self-employed includes respondents who were self-employed or were a business owner in a non-incorporated business.

				64	Other science and engineering-related fields	646100	Architecture/ environmental design
						646520	Actuarial science
3	Non-S&E fields	7	Non-S&E fields	71	Management and administration fields	716020	Other agricultural business and production
						716510	Accounting
						716530	Business administration and management
						716540	Business, general
						716550	Business and managerial economics
						716570	Financial management
						716590	Other business management/ administrative services
				72	Education, except science and math teacher education	727010	Education administration
						727030	Counselor education and guidance services
						727050	Elementary teacher education
						727070	Physical education and coaching
						727080	Pre-school/ kindergarten/ early childhood teacher education
						727100	Secondary teacher education
						727110	Special education
						727130	Other education
				73	Social service and related fields	738620	Other philosophy, religion, theology
						739100	Social work
				74	Sales and marketing fields	746560	Business marketing/ marketing management
						746580	Marketing research
				75	Art and humanities fields	757600	English language, literature and letters
						757720	Other foreign languages and literature
						758200	Liberal arts/ general studies
						759260	History, other
						759410	Dramatic arts
						759420	Fine arts, all fields
						759430	Music, all fields
						759440	Other visual and performing arts
				76	Other non-S&E fields	766610	Communications, general
						766620	Journalism
						766630	Other communications
						766820	Other natural resources and conservation
						766900	Criminal justice/ protective services
						768000	Home economics
						768100	Law/ prelaw/ legal studies
						768300	Library science
						768500	Parks, recreation, leisure, and fitness studies

TABLE A-1

**Fields of study used in the NSCG data tables**

(Crosswalk)

Broad field		Major field		Minor field		Detailed field	
Code	Label	Code	Label	Code	Label	Code	Label
						769010	Public administration
						769030	Other public affairs
						769950	Other fields (not listed)

S&amp;E = science and engineering; NSCG = National Survey of College Graduates.

<sup>a</sup> In 2019, "Oceanography" was merged with "Geological sciences, other" to form "Geological sciences, other (including oceanography)" (328760).

<sup>b</sup> In 2019, "History of science" was merged with "Other social sciences" to form "Other social sciences, including history of science" (459300).

<sup>c</sup> In 2019, four detailed fields of engineering were merged with "Other engineering" to form "Other engineering, including geophysical, geological, mining, mineral, naval architecture, marine, and petroleum" (577410).

TABLE A-2

## Occupations used in the NSCG data tables

(Crosswalk)

Broad occupation		Major occupation		Minor occupation		Detailed occupation							
Code	Label	Code	Label	Code	Label	Code	Label						
1	S&E occupations	1	Computer and mathematical scientists	11	Computer and information scientists	110510	Computer and information scientists, research						
						110520	Computer network architect						
						110540	Computer support specialists						
						110550	Computer system analysts						
						110560	Database administrators						
						110570	Information security analysts						
						110580	Network and computer systems administrators						
						110590	Software developers – applications and systems software						
						110600	Web developers						
						110610	Other computer and information science occupations						
						110880	Computer engineers, software						
		12	Mathematical scientists	121720	Mathematicians	121730	Operations research analysts, including modeling	121740	Statisticians				
										121760	Other mathematical scientists		
												182760	Postsecondary teachers - Computer sciences
												2	Biological, agricultural, and other life scientists
		22	Biological and medical scientists	220220	Biochemists and biophysicists								
				220230	Biological scientists								
				220250	Forestry and conservation scientists								
				220270	Medical scientists (excluding practitioners)								
		23	Environmental life scientists	230240	Forestry and conservation scientists								
						28	Postsecondary teachers - life and related sciences	282710	Postsecondary teachers - Agriculture				
		282730	Postsecondary teachers - Biological sciences										
		282970	Postsecondary teachers - Other natural sciences										
		3	Physical and related scientists	31	Chemists, except biochemists	311930	Chemists, except biochemists						
								32	Earth, atmospheric, and ocean scientists <sup>a</sup>	321920	Atmospheric and space scientists		
				321940	Geologists, including earth scientists and oceanographers <sup>b</sup>								
				33	Physicists <sup>c</sup>	331960	Physicists, except biophysicists						
				34	Other physical and related scientists, including astronomers <sup>a</sup>	341980	Other physical scientists, including astronomers <sup>d</sup>						
								38	Postsecondary teachers - physical and related sciences	382750	Postsecondary teachers - Chemistry		
		382770	Postsecondary teachers - Earth, environmental, and marine sciences										
		382890	Postsecondary teachers - Physics										
		4	Social and related scientists	41	Economists	412320	Economists						
								42	Political scientists	422350	Political scientists		
												43	Psychologists

TABLE A-2

## Occupations used in the NSCG data tables

(Crosswalk)

Broad occupation		Major occupation		Minor occupation		Detailed occupation	
Code	Label	Code	Label	Code	Label	Code	Label
				44	Anthropologists <sup>e</sup>	442310	Anthropologists
				45	Other social and related scientists	452380	Other social scientists, including sociologists <sup>f</sup>
				48	Postsecondary teachers - social and related sciences	482780	Postsecondary teachers - Economics
						482900	Postsecondary teachers - Political science
						482910	Postsecondary teachers - Psychology
						482930	Postsecondary teachers - Sociology
						482980	Postsecondary teachers - Other social sciences
		5	Engineers	51	Aerospace, aeronautical, and astronautical engineers	510820	Aeronautical, aerospace, and astronautical engineers
				52	Chemical engineers	520850	Chemical engineers
				53	Civil, architectural, and sanitary engineers	530860	Civil engineers, including architectural and sanitary
				54	Electrical and computer hardware engineers	540870	Computer engineers, hardware
						540890	Electrical and electronics engineers
				55	Industrial engineers	550910	Industrial engineers
				56	Mechanical engineers	560940	Mechanical engineers
				57	Other engineers	570840	Bioengineers or biomedical engineers
						570900	Environmental engineers
						570920	Marine engineers and naval architects
						570930	Materials and metallurgical engineers
						570960	Nuclear engineers
						570970	Petroleum engineers
						570980	Sales engineers
				570990	Other engineers, including agricultural, mining, and geological <sup>g</sup>		
				58	Postsecondary teachers - engineering	582800	Postsecondary teachers - Engineering
2	S&E-related occupations	6	S&E-related occupations	61	Health-related occupations	611110	Diagnosing and treating practitioners
						611120	Registered nurses, pharmacists, dietitians, therapists, physician assistants, nurse practitioners
						611130	Health technologists and technicians
						611140	Other health occupations
						612870	Postsecondary teachers - health and related sciences
				62	S&E managers	621420	Computer and information systems managers
						621430	Engineering managers
						621440	Medical and health services managers
						621450	Natural sciences managers
				63	S&E pre-college teachers	632530	Teachers: Secondary - computer, math, or sciences
						632540	Teachers: Secondary - social sciences
				64	S&E technicians and technologists	640260	Technologists and technicians, biological and life sciences
						640530	Computer programmers, business, scientific, and process control
						641000	Electrical, electronic, industrial, and mechanical technicians

TABLE A-2

## Occupations used in the NSCG data tables

(Crosswalk)

Broad occupation		Major occupation		Minor occupation		Detailed occupation	
Code	Label	Code	Label	Code	Label	Code	Label
						641010	Drafting occupations, including computer drafting
						641020	Surveying and mapping technicians
						641030	Other engineers, technologists, and technicians
						641040	Surveyors, cartographers, and photogrammetrists
						641970	Technologists and technicians in the mathematical or physical sciences <sup>h</sup>
				65	Other S&E-related occupations	650810	Architects
						651710	Actuaries
3	Non-S&E occupations	7	Non-S&E occupations	71	Non-S&E managers	711410	Top-level managers, executives, and administrators
						711460	Education administrators
						711470	Other mid-level managers
				72	Management-related occupations	721510	Accountants, auditors, and other financial specialists
						721520	Personnel, training, and labor relations specialists
						721530	Other management-related occupations
				73	Non-S&E precollege teachers	732510	Teachers: Pre-kindergarten and kindergarten
						732520	Teachers: Elementary
						732550	Teachers: Secondary - other subjects
						732560	Teachers: Special education - primary and secondary
						732570	Teachers: Other precollegiate area
				74	Non-S&E postsecondary teachers	742720	Postsecondary teachers - Art, drama, and music
						742740	Postsecondary teachers - Business commerce and marketing
						742790	Postsecondary teachers - Education
						742810	Postsecondary teachers - English
						742820	Postsecondary teachers - Foreign language
						742830	Postsecondary teachers - History
						742880	Postsecondary teachers - Physical education
						742990	Postsecondary teachers - Other postsecondary fields
				75	Social services and related occupations	750400	Clergy and other religious workers
						750700	Counselors, educational, vocational, mental health, and substance abuse
						752400	Social workers
				76	Sales and marketing occupations	762000	Insurance, securities, real estate, and business services
						762010	Sales occupations, commodities, except retail
						762020	Sales occupations, retail
						762030	Other marketing and sales occupations
				77	Art, humanities, and related occupations	770100	Writers, editors, public relations specialists, artists, entertainers, and broadcasters

TABLE A-2

**Occupations used in the NSCG data tables**

(Crosswalk)

Broad occupation		Major occupation		Minor occupation		Detailed occupation	
Code	Label	Code	Label	Code	Label	Code	Label
						772330	Historians
				78	Other non-S&E occupations	780310	Accounting clerks, and bookkeepers
						780320	Secretaries, receptionists, and typists
						780330	Other administrative occupations
						781100	Farmers, foresters, and fishermen
						781200	Lawyers and judges
						781300	Librarians, archivists, and curators
						782210	Food preparation and service occupations
						782220	Protective services
						782230	Other service occupations, except health
						783000	Other teachers and instructors
						784010	Construction and extraction occupations
						784020	Installation, maintenance, and repair occupations
						784030	Precision/ production occupations
						784050	Transportation and material moving occupations
						785000	Other occupations

S&E = science and engineering; NSCG = National Survey of College Graduates.

<sup>a</sup> This label was revised in 2019.

<sup>b</sup> "Oceanographers" were merged with "Geologists, including earth scientists" to form "Geologists, including earth scientists and oceanographers" (321940).

<sup>c</sup> "Astronomers" were separated from "Physicists and astronomers" to form "Physicists" (33).

<sup>d</sup> "Astronomers" were merged with "Other physical scientists" to form "Other physical scientists, including astronomers" (341980).

<sup>e</sup> "Sociologists" were separated from "Sociologists and anthropologists" to form "Anthropologists" (44).

<sup>f</sup> "Sociologists" were merged with "Other social scientists" to form "Other social scientists, including sociologists" (452380).

<sup>g</sup> "Agricultural engineers" and "Mining and geological engineers" were merged with "Other engineers" to form "Other engineers, including agricultural, mining, and geological" (570990).

<sup>h</sup> "Technologists and technicians in the mathematical sciences" were merged with "Technologists and technicians in the physical sciences" to form "Technologists and technicians in the mathematical or physical sciences" (641970).

## Notes

---

- 1 Bachelor's degrees include equivalent undergraduate academic degrees awarded by colleges and universities in countries that may name their degrees differently.
- 2 With PPS sampling, the probability of selection was proportional to the ACS final person-level weight, adjusted to account for imputed educational attainment, incomplete addresses, or invalid names.

## Acknowledgments and Suggested Citation

---

### Acknowledgments

Lynn Milan of the National Center for Science and Engineering Statistics (NCSES) developed and coordinated this report under the leadership of Emilda B. Rivers, NCSES Director; Vipin Arora, NCSES Deputy Director; and John Finamore, NCSES Chief Statistician. Jock Black (NCSES) reviewed the report.

The Census Bureau, under National Science Foundation interagency agreement number NCSE-2040211, collected and tabulated the data for the NSCG. The statistical data tables were compiled by Greg Orlofsky (Census) and verified by Nguyen Tu Tran (DMI). Data and publication processing support was provided by Devi Mishra, Christine Hamel, Tanya Gore, Joe Newman, and Rajinder Raut (NCSES).

NCSES thanks the college graduates who participated in the NSCG for their time and effort in generously contributing to the information included in this report.
