## General Notes

---

This report provides data on the budget authority conferred to U.S. federal agencies to fund the research and development (R&D) and R&D plant components of their programs in FYs 2021–23. *Budget authority* is the primary source of legal authorization to enter into obligations that result in outlays. Budget authority is most commonly granted in the form of appropriations by the congressional committees assigned to determine the budget for each function. These technical notes cover the main features of the new R&D budget authority data documented in this report.

## Data Tables

---

Table	Title
1	Federal budget authority for R&D and R&D plant, by budget function, ordered by FY 2020 R&D and R&D plant total: FYs 2021–23
2	Distribution of federal budget authority for R&D and R&D plant, by budget function: FYs 2021–23
3	Federal budget authority for R&D and R&D plant as a percentage of total budget authority, by budget function: FYs 2021–23
4	Federal budget authority for basic research, by budget function: FYs 2021–23
5	Federal budget authority for National defense (050) R&D and R&D plant: FYs 2021–23
6	Department of Defense, total obligational authority for research, development, test, and evaluation, by DOD budget activity: FYs 2021–23
7	Federal budget authority for International affairs (150) R&D and R&D plant: FYs 2021–23
8	Federal budget authority for General science and basic research (251) R&D and R&D plant: FYs 2021–23
9	Federal budget authority for Space flight, research, and supporting activities (252) R&D and R&D plant: FYs 2021–23
10	Federal budget authority for Energy (270) R&D and R&D plant: FYs 2021–23
11	Federal budget authority for Natural resources and environment (300) R&D and R&D plant: FYs 2021–23
12	Federal budget authority for Agriculture (350) R&D and R&D plant: FYs 2021–23
13	Federal budget authority for Commerce and housing credit (370) R&D and R&D plant: FYs 2021–23
14	Federal budget authority for Transportation (400) R&D and R&D plant: FYs 2021–23
15	Federal budget authority for Community and regional development (450) R&D and R&D plant: FYs 2021–23
16	Federal budget authority for Education, training, employment, and social services (500) R&D and R&D plant: FYs 2021–23
17	Federal budget authority for Health (550) R&D and R&D plant: FYs 2021–23
18	National Institutes of Health, federal budget authority for R&D and R&D plant: FYs 2021–23
19	Federal budget authority for Medicare (570) R&D and R&D plant: FYs 2021–23

Table	Title
20	Federal budget authority for Income security (600) R&D and R&D plant: FYs 2021–23
21	Federal budget authority for Veterans benefits and services (700) R&D and R&D plant: FYs 2021–23
22	Federal budget authority for Administration of justice (750) R&D and R&D plant: FYs 2021–23
23	Federal funding for R&D, R&D plant, and basic research, by budget function: FYs 1955–2023
24	Federal funding for R&D and R&D plant for national defense and civilian functions: FYs 1955–2023
25	Federal funding for R&D plus capital R&D, by GBARD socioeconomic objectives: FYs 2000–23

RDT&amp;E = research, development, test, and evaluation.

<sup>a</sup> The preliminary data available from the agencies for FY 2022 at the time of this report reflect mainly the continuing resolution funding levels that existed through mid-March 2022 and not yet those of the finalized appropriations enacted shortly thereafter.

<sup>b</sup> This item includes appropriate personnel costs in direct support of conduct of R&D, other appropriations funding certain Department of Defense programs, and medical research funded outside RDT&E accounts. Includes \$415 million in emergency RDT&E funding for COVID-19 activities in FY 2020.

**Note(s):**

Detail may not add to total because of rounding. Percent change is calculated on unrounded data.

**Source(s):**

Agencies' submissions to the Office of Management and Budget (OMB) per MAX Schedule C, agencies' budget justification documents, supplemental data obtained from agencies' budget offices, and Executive Office of the President, OMB, *Budget of the United States Government, Fiscal Year 2023*.

TABLE 6

**Department of Defense, total obligational authority for research, development, test, and evaluation, by DOD budget activity: FYs 2021–23**

(Millions of dollars and percent change)

Funding category and agency	Budget activity	2021 actual	2022 preliminary <sup>a</sup>	2023 proposed	2021–22 (% change)	2022–23 (% change)
Adjustment for RDT&E budget authority <sup>d</sup>	--	588	2,515	3,503	na	na

na = not applicable.

DOD = Department of Defense; RDT&amp;E = research, development, test, and evaluation.

<sup>a</sup> The preliminary data available from the agencies for FY 2022 at the time of this report reflect mainly the continuing resolution funding levels that existed through mid-March 2022 and not yet those of the finalized appropriations enacted shortly thereafter.

<sup>b</sup> Totals for development spending across all years do not include DOD Budget Activity 7 (BA-7) (Operational Systems Development) due to implementation of the narrowed definition of development described by the Office of Management and Budget (OMB) in its Circular A-11 of July 2016. These BA-7 funds support development efforts to upgrade systems that have been fielded or have received approval for full-rate production and anticipate production funding in the current or subsequent fiscal year.

<sup>c</sup> RDT&E budget activity codes are broad categories reflecting different types of RDT&E efforts, as specified in the DOD Financial Management Regulation.

<sup>d</sup> Detailed budget information on DOD RDT&E activities is available only in total obligational authority (TOA), which is the sum of new budget authority, unobligated budget authority from previous years, and other authorized credits. The adjustment converts TOA to budget authority by subtracting unobligated budget authority from previous years and other authorized credits from TOA.

**Note(s):**

Detail may not add to total because of rounding. Percent change is calculated on unrounded data.

**Source(s):**

Agencies' submissions to the Office of Management and Budget (OMB) per MAX Schedule C, agencies' budget justification documents, supplemental data obtained from agencies' budget offices, and Executive Office of the President, OMB, *Budget of the United States Government, Fiscal Year 2023*.

\* = amount less than \$500,000. na = not applicable. NA = not available; data were not collected for all budget functions in all years.

ARRA = American Recovery and Reinvestment Act of 2009.

<sup>a</sup> Other includes amounts not explicitly tallied in one of the separately identified categories.

<sup>b</sup> Data on budget authority for R&D plant were not tabulated before FY 2000.

<sup>c</sup> Total for FY 2009 is the sum of non-ARRA and ARRA funds.

<sup>d</sup> The data for FY 2017 and onward reflect application of the narrowed definition of *development* described by the Office of Management and Budget (OMB) in its Circular A-11 of July 2016. The previous years' numbers reflect use of the former *development* definition.

<sup>e</sup> Agencies in several functions received emergency COVID-19 funding for R&D and/or R&D plant in FY 2020 and FY 2021. This funding may be included in the data in this table, although this is not clear in all cases.

<sup>f</sup> Not all basic research funded by the federal government falls into the General science and basic research (251) category. Federal funding for basic research arises in other functional categories—such as National defense or Health—and is included in the category funding totals there.

**Note(s):**

Detail may not add to total because of rounding. In FY 2007, the Department of Homeland Security (DHS) changed its R&D portfolio to reclassify funding in National defense and most Administration of justice as General science and basic research; in FY 2013, this was reclassified back to Administration of justice. In FY 2004, DHS changed its R&D portfolio to reclassify funding in General science and basic research and in Agriculture as Administration of justice. In FY 2000, the National Aeronautics and Space Administration (NASA) transferred funding for the International Space Station program from R&D to R&D plant; the change is reflected in the budget authority for Space flight, research, and supporting activities. In FYs 2009 and 2012, NASA revised the classification of its R&D and non-R&D funding. In FY 2000, the National Institutes of Health in the Department of Health and Human Services classified all of its previous development activities as basic research or applied research, with a resulting increase in Health basic research. In FY 1998, many Department of Energy programs were reclassified from Energy to General science and basic research. In FY 1998, the Department of Veterans Affairs began reporting medical care support funds as a part of its total research budgetary resources; the change is reflected in the budget authority for Veterans benefits and services.

**Source(s):**

Data from FYs 1955–94 are from agencies' submissions to OMB, Circular A-11, exhibit 44A, "Research and development activities," and from supplemental data obtained from agencies' budget offices. Data from FYs 1995–2021 are from agencies' submissions to OMB per MAX Schedule C, budget justification documents, and supplemental data obtained from agencies' budget offices.

ARRA = American Recovery and Reinvestment Act of 2009.

<sup>a</sup> The total for FY 2009 is the sum of non-ARRA and ARRA funds.<sup>b</sup> The application of a narrowed *development* definition (by the Office of Management and Budget [OMB]) is shown starting in FY 2017. The previous years' numbers reflect use of the former *development* definition.<sup>c</sup> Agencies in several functions received emergency COVID-19 funding for R&D and/or R&D plant in FY 2020 and FY 2021. This funding may be included in the data in this table, although this is not clear in all cases.**Note(s):**

The National defense function includes Department of Defense military activities and Department of Energy atomic energy defense programs; some years also include defense-related R&amp;D in the Department of Homeland Security and the Department of Justice. Civilian functions include all other federally funded R&amp;D activities.

**Source(s):**Agencies' submissions to the Office of Management and Budget (OMB) per MAX Schedule C, agencies' budget justification documents, supplemental data obtained from agencies' budget offices, and Executive Office of the President, OMB, *Budget of the United States Government, Fiscal Year 2023*.

NA = not available.

GBARD = government budget allocations for R&D; GUF = general university funds.

<sup>a</sup> Unlike many other countries, the United States does not support R&D by higher education institutions through large block grants to cover administrative, teaching, and research costs. Accordingly, the data entries for the United States in this column are always zero.

**Note(s):**

Detail may not add to total because of rounding. The data in this table reflect an estimated adjustment to the previously published 2000–16 time series totals (in tables 23 and 24) applying the narrowed definition of *development* described by the Office of Management and Budget in its Circular A-11 of July 2016. The 14 socioeconomic objectives categories listed are those identified by the European Union in the 2007 edition of its *Nomenclature for the Analysis and Comparison of Scientific Programmes and Budgets* (NABS). The NABS categories are the basis of the GBARD indicators that the Organisation for Economic Co-operation and Development reports for member countries and selected others in its twice-yearly *Main Science and Technology Indicators* reports. U.S. data for objectives 9, 10, and 11 are not reported for 2000–06 because the NABS category revisions of 2007 and equivalent data for these earlier years were not available. The lack of availability of details for these objectives is the main reason that the sum of the reported details for 2000-06 do not add to the "R&D plus capital R&D" totals.

**Source(s):**

National Center for Science and Engineering Statistics, reclassification (2022) according to NABS category definitions of R&D funding from agencies' submissions to OMB per MAX Schedule C, agencies' budget justification documents, and supplemental data obtained from agencies' budget offices.

## Technical Notes

---

### Overview

All activities covered by the federal budget, including R&D, are classified into 20 broad functional categories (see section “[Budget Functions and Classifying R&D](#)”). R&D activities currently are in 16 of the 20 categories.

The tables in this report provide R&D budget authority detail for FYs 2021–23 by agency and major programs for each of the categories in which R&D is present. Several concluding tables also show budget authority data for R&D in FY 2020 and earlier years.

The data for FY 2021 are the *actual* budget authorities received by federal agencies for R&D that year. These numbers update the preliminary data for FY 2021 published in the previous edition (FYs 2020–22) of this report series.

The data for FY 2022 are *preliminary*. These preliminary numbers are normally agency estimates based on final congressional appropriations for the fiscal year. However, considerable delay arose in the Congress and with the administration in completing the final spending legislation for FY 2022, which had already formally started on 1 October 2021. Initial FY 2022 funding for the government came in the form of four temporary continuing resolutions covering 1 October through 11 March. The final funding levels were passed as a consolidated spending bill on 10 March 2022: the Consolidated Appropriations Act, 2022 (H.R. 2471).

The data for FY 2023 are the funding levels *proposed* by the president’s *Budget of the United States Government, Fiscal Year 2023* (released 28 March 2022). At the time of this report, the funding levels for FY 2023 remain the subject of ongoing legislation by Congress.

Congress took a number of legislative steps from March 2020 through March 2021 to provide added appropriations in response to the COVID-19 pandemic, some of which provided increased funding for related R&D. Included here are the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020 (H.R. 6074, 6 March 2020); the Families First Coronavirus Response Act (H.R. 6201, 18 March 2020); the Coronavirus Aid, Relief, and Economic Security Act (H.R. 748, 27 March 2020); and the Paycheck Protection Program and Health Care Enhancement Act (H.R. 266, 24 April 2020). Additional funding for R&D related to COVID-19 was also provided by the aforementioned Consolidated Appropriations Act, 2021 (H.R. 133, 27 December 2020) and by the American Rescue Plan Act of 2021 (H.R. 1319, 10 March 2021).

The data throughout this report reflect agency documents and other Office of Management and Budget (OMB) data available through October 2022. Data reported here as *preliminary* or *proposed* will be revised in subsequent editions of this report series to reflect the eventual congressional appropriation actions and agency program funding decisions.

In general, the agencies’ estimates of funding for R&D in both FYs 2021 and 2022 stemming from the congressional appropriations in both these years in response to the COVID-19 pandemic are unevenly and incompletely documented and updates or revisions are not available. Notes accompanying many of the tables indicate the extent to which funding from these supplementary appropriations are recognized in the reported data.

**Table 25** of this report reclassifies the budget function data in this report’s earlier tables according to the 14 socioeconomic objective categories identified by the European Union’s NABS classification (*Nomenclature for the Analysis and Comparison of Scientific Programmes and Budgets*, 2007 edition). NABS is used by the Organisation for Economic Co-operation and Development (OECD) in reporting Government Budget Allocations for R&D (GBARD) indicators. The GBARD indicators are widely recognized around the world as a basis for comparing countries’ priorities for government R&D funding.

## Definitions

### Research, Development, and R&D Plant

In this report, R&D refers to basic research, applied research, and experimental development activities in science and engineering.

*Research and experimental development* is creative and systematic work undertaken in order to increase the stock of knowledge—including knowledge of people, culture, and society—and to devise new applications using available knowledge.

*R&D* includes administrative expenses, such as the operating costs of research facilities and equipment and other overhead costs. It also includes funds for the purchase of minor equipment—such as personal computers, standard microscopes, and simple spectrometers.

*Basic research* is experimental or theoretical work undertaken primarily to acquire new knowledge of the underlying foundations of phenomena and observable facts. Basic research may include activities with broad or general applications in mind, such as the study of how plant genomes change, but should exclude research directed toward a specific application or requirement, such as the optimization of the genome of a specific crop species.

*Applied research* is original investigation undertaken in order to acquire new knowledge. Applied research is, however, directed primarily toward a specific, practical aim or objective.

*Experimental development* is creative and systematic work, drawing on knowledge gained from research and practical experience, which is directed at producing new products or processes or improving existing products or processes. Like research, experimental development will result in gaining additional knowledge.

Experimental development activities include (1) the production of materials, devices, and systems or methods, including the design, construction, and testing of experimental prototypes; and (2) technology demonstrations, where a system or component is being demonstrated at scale for the first time and it is realistic to expect additional refinements to the design (feedback R&D) following the demonstration.

Before the publication of OMB's revised guidance in Circular A-11 of July 2016, a more expansive definition of "development" was the basis for agency R&D reporting. The present guidance now identifies several specific exclusions. Experimental development does *not* include (1) *user demonstrations*, where the cost and benefits of a system are being validated for a specific use case (e.g., low-rate initial production activities); or (2) *preproduction development*, which is defined as nonexperimental work on a product or system before it goes into full production, including activities such as tooling and development of production facilities. For example, activities and programs that are categorized as "Operational Systems Development" in the Department of Defense's Research, Development, Test, and Evaluation (RDT&E) budget activity structure are no longer included as R&D. Activities and programs of that type generally are now reported as investments in other major non-R&D equipment.

*R&D plant* includes facilities and major equipment necessary for the execution of an R&D program. It includes the purchase, construction, manufacture, rehabilitation, or major improvement of physical assets such as land, major fixed equipment, and supporting infrastructure like a sewer line or housing at a remote location. It also includes the acquisition, design, or production of major movable equipment, such as mass spectrometers, research vessels, DNA sequencers, and other movable major instruments for use in R&D activities.

The data in this report exclude (1) all non-R&D activities performed within budget functions that conduct R&D and (2) all functions in which no R&D is conducted. [Table 6](#) is an exception, however; it continues to report RDT&E totals that previously would have been classified as R&D. In part, this table provides a gauge of the impact of the narrowed definition of development (as detailed earlier) on defense R&D totals.

## Budget Authority, Obligations, and Outlays

The federal R&D funding data presented here (with only a few noted exceptions) are provided in terms of *budget authority*. Budget authority is used because it is the initial budget stage for congressional action on the president's proposed budget. Budget authority imposes a ceiling on obligations and outlays; obligations and outlays flow from budget authority.

*Budget authority* is the primary source of legal authorization to enter into obligations that will result in outlays. Budget authority is most commonly granted in the form of appropriations by the congressional committees assigned to determine the budget for each function.

*Obligations* represent the amounts for orders placed, contracts awarded, services received, and similar transactions during a given period, regardless of when the funds were appropriated and when the future payment of money is required.

*Outlays* represent the amounts for checks issued and cash payments made during a given period, regardless of when the funds were appropriated or obligated.

## Budget Functions and Classifying R&D

The federal budget total is the sum of funding across the 20 broad functional categories. These categories are National defense (function 050); International affairs (150); General science, space, and technology (250); Energy (270); Natural resources and environment (300); Agriculture (350); Commerce and housing credit (370); Transportation (400); Community and regional development (450); Education, training, employment, and social services (500); Health (550); Medicare (570); Income security (600); Social security (650); Veterans benefits and services (700); Administration of justice (750); General government (800); Net interest (900); Allowances (920); and Undistributed offsetting receipts (950).

R&D has never been reported in 4 of these 20 functions: Social security (650), Net interest (900), Allowances (920), and Undistributed offsetting receipts (950). As such, these categories are not present in this report's data—except indirectly, where R&D is described as a proportion of total federal budget authority.

Small amounts of R&D had been reported in the General government (800) category up through FY 2002 but turned to zero thereafter. A small amount of R&D was again reported in FY 2012 but has been zero throughout the FY 2021–23 period covered in this report.

To better highlight R&D areas of high interest, the tables in this report split the General science, space, and technology (250) category into its two subfunctions: General science and basic research (251) and Space flight, research, and supporting activities (252).

Overall, this report's tables separately cover 16 functional categories: 14 at the broad functional category level and 2 at the subcategory level (viz., General science and basic research (251) and Space flight, research, and supporting activities (252)).

Each R&D activity is assigned to only one functional category—which is consistent with the official codes used in budget documents, even though the R&D activity may address the objectives of several functions. For example, all R&D activities sponsored by the Department of Defense (except for those of the U.S. Army Corps of Engineers) are classified as National defense (050), even though some of these have secondary objectives, such as Space flight, research, and supporting activities (252) or Health (550). Nonetheless, an agency's overall R&D effort can involve multiple activities spread across several functional categories, which means that a functional category can show the presence of several agencies.

Finally, not all federally sponsored basic research is categorized in the General science and basic research (251) subfunction. Some basic research is included in many of the other functional categories. Also, not all the R&D included in the General science and basic research (251) subfunction is basic research—some is applied research.

**Table A-1** maps the mix of agency funding of R&D activities in FYs 2021–23 across the budget function categories.

## Data Sources

The federal budget does not include a separately identified R&D account. Furthermore, most appropriations for R&D are not directly labeled as such (except in certain program areas, such as defense, energy, health, and environment). Thus, most funds for R&D are not line items in agency budget submissions but are included instead as part of general program funding.

To provide information on federal R&D funding, OMB requires all agencies with R&D funding levels greater than \$10 million annually to submit data on their R&D programs as part of their annual budget submissions. Such agencies are requested to provide data on their funding levels for basic research, applied research, experimental development, R&D facilities, and capital equipment for R&D, in accordance with OMB's Circular A-11, Section 84, "Character Classification (Schedule C)" at <https://www.whitehouse.gov/wp-content/uploads/2018/06/s84.pdf>.

The data in this report were collected from July through October 2022 and represent the agencies' official estimates of actual and proposed federal funding for R&D over FYs 2021–23. The data are based primarily on information provided to OMB by 25 agencies, which account for about 99% of all federally sponsored R&D activities. (OMB has routinely tracked the R&D budget authority for these 25 agencies; other agencies with negligible levels of R&D budget authority are excluded.) The data reflect R&D funding information that became available from individual agencies after the administration's FY 2023 budget proposal, *Budget of the United States Government, Fiscal Year 2023*, was prepared and transmitted to Congress on 28 March 2022. This information consists of budget justification documents that agencies submit to Congress and supplemental, program-specific information obtained from agency budget and program staff through October 2022. Accordingly, the budget numbers reported for individual activities, programs, or agencies may differ somewhat from those published in the president's budget or in agency budget documents.

TABLE A-1

## Agency and budget function crosswalk, federal R&amp;D funding, by budget function: FYs 2021–23

(Crosswalk)

Agency	Budget function															
	National defense (050)	International affairs (150)	General science and basic research (251)	Space flight, research, and supporting activities (252)	Energy (270)	Natural resources and environment (300)	Agriculture (350)	Commerce and housing credit (370)	Transportation (400)	Community and regional development (450)	Education, training, employment, and social services (500)	Health (550)	Medicare (570)	Income security (600)	Veterans benefits and services (700)	Administration of justice (750)
Agency for International Development		X														
Appalachian Regional Commission									X							
Army Corps of Engineers (civil)						X										
Consumer Product Safety Commission											X					
Department of Agriculture						X	X									
Department of Commerce						X		X								
Department of Defense (military)	X															
Department of Education										X						
Department of Energy	X		X		X											
Department of Health and Human Services											X	X	X			
Department of Homeland Security	X					X		X								X
Department of the Interior						X			X							
Department of Justice	X															X
Department of State		X														
Department of Transportation								X								
Department of Veterans Affairs															X	
Environmental Protection Agency						X										
National Aeronautics and Space Administration				X				X								
National Science Foundation			X													
Nuclear Regulatory Commission					X											
Postal Service								X								
Small Business Administration								X								
Smithsonian Institution										X						
Social Security Administration														X		
Tennessee Valley Authority					X											

X = R&amp;D function funded by specified agency.

## Acknowledgments and Suggested Citation

---

### Acknowledgments

Mark Boroush (retired) and Christopher V. Pece of the National Center for Science and Engineering Statistics (NCSES) developed and oversaw preparation of this report under the guidance of Gary W. Anderson, NCSES Acting Program Director and John Jankowski, Senior Economic Advisor, and under the leadership of Emilda B. Rivers, NCSES Director; Vipin Arora, NCSES former Deputy Director; and John Finamore, NCSES Chief Statistician. Jock Black (NCSES) reviewed the report.

Under NCSES contract with the American Association for the Advancement of Science, Alessandra Zimmermann, Analyst/Writer, R&D Budget and Policy Program, compiled the tables in this report.

NCSES thanks the program and budget offices at the federal agencies that provided information for this report.
