NA = not available.

FFRDC = federally funded research and development center.

[a] In 2024, the data source for federal intramural R&D expenditures changed from the National Center for Science and Engineering Statistics (NCSES) Survey of Federal Funds for Research and Development to the NCSES Federal Facilities Research and Development Survey. For differences in methodology, please see the respective survey pages (https://ncses.nsf.gov/surveys/federal-funds-research-development/#methodology and https://ncses.nsf.gov/surveys/federal-facilities-research-development/#methodology) and the report *New Survey Shows R&D Performance Within Federal Facilities Totaled $34.5 Billion in FY 2022* (https://ncses.nsf.gov/pubs/nsf25305). For years prior to 2024, federal intramural includes expenditures for federal intramural R&D as well as costs associated with administering extramural R&D procurements. Beginning in 2016, the data on federal intramural R&D explicitly exclude expenditures for preproduction development. (Preproduction development is nonexperimental work on a product or system before it goes into full production. For example, activities and programs that are categorized as Operational Systems Development in the Department of Defense's Research, Development, Test and Evaluation [RDT&E] budget activity structure.) This change aligns the federal intramural R&D data with the U.S. Office of Management and Budget's clarification of its definition of R&D. In 2016–18, this intramural preproduction development totaled in the range of $5 billion to $7 billion each year.

[b] The R&D expenditures of FFRDCs are chiefly federally funded; the small remainder ($447 million of the $29.9 billion total in 2023) reflects funding from state or local government, businesses, nonprofit organizations, and other sources. Prior to 2001, the data did not distinguish federal and nonfederal funding for FFRDC R&D and are reported as all federal funding; in 2001 and forward, the data provide detail on federal and nonfederal sources of funding (see table 6). The data for 1953–54 reflect the R&D performance of only university-administered FFRDCs. In 1953–54, the R&D performance and funding of industry-administered FFRDCs were not separately reported but are included instead in the business R&D data for these years. Similarly, in 1953–54, the R&D performance and funding for nonprofit-administered FFRDCs were not separately reported but are included instead in the nonprofit organization R&D data for these years.

[c] Nonfederal government is state intramural R&D performance, including state agency and department employees and services performed by others in support of internal R&D projects. Data on state government intramural R&D became available starting in 2006. Funding for this R&D is mainly states' own funds ($395 million of the $777 million total in 2023) or from the federal government ($335 million in 2023), but other sources include other nonfederal governments ($11 million), businesses ($18 million), higher education ($4 million), or nonprofit organizations ($15 million).

[d] Business is R&D performed by companies in the domestic United States. Business R&D data for 2017 and later years come from the NCSES annual Business Enterprise Research and Development (BERD) Survey and its predecessor, the Business Research and Development Survey (BRDS), which cover all publicly or privately held companies with 10 or more employees, plus the Annual Business Survey (ABS), which covers the R&D activities of businesses with 1–9 employees. Data for 2008–15 come from the NCSES annual Business Research and Development and Innovation Survey (BRDIS), which covered all publicly or privately held companies with 5 or more employees. Data for 2016 included the BRDIS data for that year plus the data from the 2016 Business R&D and Innovation Survey–Microbusiness (BRDI-M), which collected statistics on the R&D activities of companies with 1–4 employees. BERD, ABS, BRDIS, BRDS, and BRDI-M distinguish R&D performed and paid for by the company from R&D performed by the company but paid for by one or more others (i.e., the federal government, state or local government, domestic companies, foreign companies, foreign governments, other organizations inside or outside the United States). Prior to 2008, the data collected by the Survey of Industrial Research and Development distinguished only federally and nonfederally funded business R&D, and, for these years, the own-funding data column includes all nonfederal sources of funding. Some business R&D performance in the United States paid for by other domestic businesses ($28.0 billion in 2023) and foreign businesses includes funding from both parent or unaffiliated businesses outside the United States ($25.8 billion in 2023) and funding from U.S. businesses' foreign subsidiaries ($34.1 billion in 2023). Business R&D performance funded by other sources includes state government, foreign governments, domestic and foreign academic institutions, and all other sources in the United States and abroad.

[e] Before 2003, higher education R&D covered only science and engineering (S&E) fields; in 2003 and later years, R&D in non-S&E fields is also included. (Non-S&E R&D was 3.4% of total higher education R&D expenditures in FY 2003 and 6.4% of the total in FY 2023. In 1998 and later years, the higher education R&D data have been adjusted to eliminate double counting of R&D funds passed through from academic institutions to other academic and nonacademic (business, nonprofit, other) subrecipients. (In FY 1998, the total of pass-through funds reported was $994 million, with $479 million to other academic recipients and $337 million nonacademic recipients. In FY 2023, total pass-through was $9.5 billion, with $5.2 billion to other academic recipients and $4.3 billion to nonacademic recipients.) The nonfederal government funding category includes support from state and local government. The nonprofit funding category includes support from nonprofit organizations and other sources not elsewhere classified (in FY 2023, $6.2 billion was from nonprofit organizations, and $3.0 billion was from these unclassified other sources).

[f] The most recent data on nonprofit R&D come from two sources: the annual Nonprofit Research Activities (NPRA) modules (2020–23) of the Annual Business Survey and the 2016 NPRA Survey. Data for 2017–2019 are estimated based on the 2016 and 2020 surveys. The 1998–2015 data for nonprofit R&D funded by the federal government come from the NCSES annual Survey of Federal Funds for Research and Development; nonprofit R&D funded by businesses and by the nonprofit sector itself for that period are estimated, based on parameters from the 1996–97 Survey of Research and Development Funding and Performance by Nonprofit Organizations.

[g] Beginning in 2024, federal R&D expenditures from all funding sources includes federal intramural R&D performance funded by nonfederal sources ($0.6 billion in 2024) as collected by the NCSES Federal Facilities Research and Development Survey.

[h] Some data for 2023 are preliminary and may be revised later.

[i] The data for 2024 include estimates and are likely to be revised later.

Note(s):
Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For trend comparisons, use only the historical data reported in this table because some back-year data may have been revised. Data are based on reports by performers in the NCSES annual surveys on R&D expenditures: BERD, ABS (which includes modules on micro-BERD and NPRA), Higher Education Research and Development Survey, Survey of Federal Funds for Research and Development, Federal Facilities Research and Development Survey, FFRDC Research and Development Survey, and Survey of State Government Research and Development. R&D expenditures by business performers—and, before 2001, also industry-administered FFRDCs—were collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data. For federal performers in 1977 and afterward, the approximation equals 75% of the amount reported in the same fiscal year plus 25% of the amount reported in the subsequent fiscal year. Prior to 1977, the federal fiscal year began on 1 July, not 1 October, and the approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year. The fiscal year for higher education performers and state government performers generally begins 1 July, and the calendar year approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year.
